

Sponsored by TECHLAV, the SIPI partner delivered a “Rover Technology” STEM course at the Bernalillo High School for Spring 2016. During this course the students learned to assemble the rovers and then program them. The students will be also asked to modify their rovers, mount the sensors such as light sensors to complete various tasks such as line following and color tracking. Dr. Nader Vadie, the outreach lead for the TECHLAV project and Ms. Katrina Lake from Bernalillo High School coordinated this exciting course. The feedback was amazing; the students are absolutely loving the rovers – they have ignited the passion back into the classes.
